Scheduled for March 2023

This document outlines the upcoming release schedule for Xcitium products as follows:

Agent:
Effective on Thursday March 9th, 2023 at 09:30 AM GMT/04:30 AM EST

XCITIUM CLIENT SECURITY-WINDOWS

IMPROVEMENTS

- Arrangement of rules for network zones.
- Adding process creation time field for XCS events under parents tree with millisecond resolution.

BUG-FIXES

- Fixed the issue of unable to delete local user profiles when XCS is installed.
- Fixed the issue in client application due to web filtering causing a 1 second http traffic delay and resulting timeout.
- Fixed the issue of 3D inventor design app extremely slow when XCS is installed.
- Fixed the issue of firewall alert doesn't appear if application rule is present but disabled.
- Fixed the issue of showing HIPS block events for Registry that should not come when XCS is installed and Level 3 profile is applied.
- Fixed the issue of trusted application start.hta is blocked by Containment.
- Fixed the issue after installing the EDR agent on Windows Server 2016 causes the device stuck in loading status and cannot be booted.
- Fixed the issue of uninstalling of binary update cannot completely remove XCS services/drivers if self-protection is enabled.
- Fixed the issue of self-protection blocks the network bridge creation.
- Fixed the issue of early launch monitoring logs have parent hash instead of have target hash.
- Fixed the issue of cavwp.exe crashes.
- Fixed the issue of macro blocking prevents the MSI uninstallation after binary update.
