- Optimizations for automated emails.
- Rebranded "Successful Activation and Welcome" email.
- Update on the logo of Xcitium Enterprise switching to the Xcitium Platform.
- Improvement on report generation time format to be more understandable.
- Improvement on infrastructure to enable mapping between system parts.
- Improved password reset emails to provide more information.
- Rebranded policy name under report false positive of EDR.
- Improvement on the footer of Xcitium Enterprise.

BUG - FIXES

- Fixed the issue of accessing error of service dashboards for the specific customer.
- Fixed the issue of missing fields in the parser related to Fortigate firewalls.
- Fixed the issue of endpoint manager menu icons to expand & collapse states.
- Fixed the issue where deleting Client Proxy profile partition resulted in 404 error.
- Fixed the issue of importing profile XCS config file error.
- Fixed the issue of "Custom Variables", "Registry Variables", "COM Variables", and "File Groups Variables" being editable despite disabled permission.
- Fixed the issue of the domain does not change within the scope of rebranding in the classic interface switch.
- Fixed the issue of missing ".com" value for the destination host event types.
- Fixed the issue of the "Profile section settings" popup not showing while adding the firewall section.

DEVICE MANAGEMENT

NEW FEATURES

- Ability to set EDR versions for installation and automatic updating.

BUG - FIXES

- Fixed the issue of false offline monitor triggering.
- Fixed the issue of running scheduled procedures twice and failing with an error.
- Fixed the issue of not reporting procedure results on EM Portal for scheduled/on-demand procedures.

SECURE EMAIL GATEWAY

BUG - FIXES

- Fixed the issue of the download option for outgoing logs returning an error 'Unresolved Exception'.
