Introduction

This document contains notes about the Comodo Dragon Platform March 2021 release. The release schedule will be as follows:

US Region -> The release will start on 17th March 2021 Wednesday at 1 AM EDT

EU Region and agents -> The release will start on 18th March 2021 Thursday at 5 AM GMT

The release is expected to take 30 minutes to deploy, during that time the platform will be under maintenance mode, where you may observe minor glitches. If you observe any issues, please feel free to share with us.

Endpoint Manager

Endpoint Manager Core

New Features

- **Remove focus from "Reboot Now" button**
Ability to remove the keyboard focus from the "Reboot Now" button. After this feature, even if the users accidentally presses any key from their keyboard, the endpoint will not reboot. Users need to select and apply the reboots options.
- **Add *msedge.exe to Web Browsers file group**
Ability to have the new Microsoft Edge Browser variable on the "File Group Variables" page. After this feature, the users will be able to use the new Microsoft Edge Browser variable according to their needs as well.
- **Support for MacOS 11**
Endpoint Manager now fully supports devices running MacOS 11 operating systems. You will be able to use all functionality of ITarian Communication Agent and Comodo Client Security for this MacOS distribution.
- **Support for Android 11**
Endpoint Manager now fully supports mobile devices running Android 11 operating systems.

Bug Fixes

- Fixed the issue of Android MDM application non-persistent behavior.
- Fixed the issue of the same files not being detected on multiple servers.
- Fixed the issue of inability to clone profiles with the Maintenance Window section.
- Fixed the issue of inability to export device list in CSV using Firefox.
- Fixed the issue of scheduled procedures not running during the maintenance window.
- Fixed the issue of Communication Agent uninstallation failure.
- Fixed the issue of deleted companies populating on the Customer Selection section in Beta Reports.

Security

New Features

- **Virtual desktop to support Ability to set timeout for inactive session termination**
Ability to auto-pause the Virtual Desktop session if the session is not activated in the given time period.

Data Loss Prevention

- **Screenshot Rule**

Ability to restrict their users to take screenshots and log the performed actions according to their preferences.

Remote Monitoring and Management

New Features

- **New Custom script monitoring triggering methods**
Ability to have a new monitor triggering method that generates alert while the conditions are changed even when the monitor is 'ON' state. After this feature, the users will be able to use this triggering method for getting alerts while their monitor is still in 'ON' state.

Bug Fixes

- Fixed the issue of scheduled procedures on the first or last day of a month being executed daily.
- Fixed the issue of scheduled procedure tasks are not executed according to the schedule.

- Fixed the issue of the executed procedure failing due to “unknown reason”.

Patch Management

Bug Fixes

- Fixed the issue of scheduled OS patch management tasks are not executed according to the schedule.

Comodo Client Security

New Features

- **Virtual desktop password and disclaimer options to be not modifiable by user**
Ability to disable VDI password and disclaimer options when “Allow user to override Virtual Desktop settings” setting is enabled on portal.

Improvements

- **Real Time file check handling**
Realtime file rating operations are improved to prevent Trusted files from being rated as “Unrecognized”

Bugfixes

- Fixed the issue of Comodo Client - Security agent detecting scheduled tasks as unrecognized if environment variables are used within task options for running Trusted Applications.
- Fixed the issue of infected items not auto cleaned after full scan is completed.
- Fixed the issue of AV Database update not running every hour by scheduler.
- Fixed the issue of Comodo Client - Security causing crashes on other applications when a third party DLP solution is installed.

Data Loss Prevention:

- **Database Discovery Rules**

Ability to create “dynamic” keywords which are automatically updated with each database search.

- **Discovery Scheduling**

Ability to configure schedule for Discovery rules.

- **Additional Predefined Patterns**

Additional Predefined pattern implemented on CCS .List is as below:

- Turkish Nationality ID Number
- Credit Card Track Numbers
- Encrypted Archive
- Encrypted Document
- Source Code (C,C++,C#,PHP etc.)

Bugfixes

- Fixed the issue of DLP not recognizing credit card numbers properly.

Portal

New Features

- **Adding company information into PDF Invoice**

Ability to include company VAT information to the invoices. After this feature, the users will be able to review and use invoices with VAT information according to their needs.
